Today i got following error in colab.

```
RuntimeError: CUDA out of memory. Tried to allocate 264.00 MiB (GPU 0; 11.17 GiB total capacity; 9.12 GiB already allocated; 162.81 MiB free; 10.54 GiB reserved in total by PyTorch)
```

This is because of type of GPU. Initially colab connects to Tesla k80 today , that's why above error comes again and again. So, I am tried to terminate kernel and restarted so many times , but it again connects to tesla k80. So I am switched to kaggle. Today I had trained Faster Rcn model upto 13000 itrations. Finally uploaded to gdrive.
