(08/07/2021)

Today i had trained my model to 350 epochs. Training loss of last two days was very high, Because of some annotation files are missed in my datasets. So today I had taken dataser from my team and begin to retraining. After 350 epochs ,loss decreased to 3.14 (minimum). After training tried to detect objects with chechpoints . It's not detected .so I had decreased my detection threshold to 0.2. After that, objects are detected as person . I don't know why it is detected as person , because person is not in our classes category.
